

## Chiral compounds list 2016

### *Introduction*

ChiralVision has an extensive experience in the field of enzyme applications including:

- enzyme selection and sourcing
- immobilization
- enzymatic resolution
- enzymatic process development
- scale up
- enzymatic production of chiral compounds.

Many enzyme classes are available for the various biocatalysis application:

Hydrolases: synthesis of chiral amines, esters, alcohols, amides, carboxylic acids (lipases, esterases, proteases and amidases):

Ene reductase: asymmetric double bond reduction

Ketoreductase: asymmetric ketone reduction into chiral alcohols

Nitrile hydratases: synthesis of chiral amides from nitriles

Nitrilase: synthesis of chiral carboxylic acids from nitriles

Oxynitrilase: asymmetric synthesis of chiral cyanohydrins

$\omega$ -Transaminase: synthesis of chiral amines from ketones, ketoacids

Our chiral knowledge is available for you. Contact us to find out if our technology can be applied to prepare your compound of interest.
